

INDIANA UNIVERSITY

BORKENSTEIN
COURSE

Center for Studies
of Law in Action

Forensic Alcohol Toxicology Databases
and Their Courtroom Applications

by
J.G. Wigmore

The computer has revolutionized the preparation, publication and dissemination of scientific papers. Word processing and computer software for graphics and statistical analyses have allowed for easier writing of journal articles. E-mail, e-publishing and the World Wide Web have allowed for a faster dissemination of peer reviewed scientific articles. This section of the course will discuss some of the resources available to the forensic alcohol toxicologist on the Internet. In addition the proper application of these articles to the courtroom setting will be discussed as well as the LUCAS approach to courtroom testimony.
